

# Clerk of the Board of Supervisors Facility Services

## Hydrangea

Hydrangea plants are perennial, hardy, heavy flowering plants with deep green spoon-shaped leaves. They do well in all types of shade but do best in partial shade. Hydrangeas

bloom around middle to late spring with abundant flowers and thick leaves. They are recommended for filling large shaded areas and make an effective under planting. Average

garden soil is sufficient for Hydrangea. CAC has several varieties of Hydrangea. They are planted along the East Plaza, NE wing, and North Entrance ADA ramp planter beds.

For additional information or the location of Ajuga in CAC Garden, please contact Frank Ortega at [fortegcb@co.san-diego.ca.us](mailto:fortegcb@co.san-diego.ca.us)
